SUMMARY

AI-native product engineer and full-stack developer who builds production-grade web apps, SaaS, and MVPs end to end - from architecture to deployment. I own the full lifecycle and ship scalable software solo and fast; my most recent build was a regulated, multi-tenant fintech SaaS delivered solo for a client.

SKILLS

Frontend: React 19, Next.js (App Router), TypeScript, Tailwind CSS, responsive UI/UX

Backend: Node.js, NestJS, REST APIs, third-party API integrations, authentication & user management

Databases & Infra: PostgreSQL, Supabase, Neon, MongoDB, Prisma, Drizzle, Redis, Postgres RLS, multi-tenant architecture

AI & Mobile: OpenAI / LLM integration, RAG, on-device AI (Apple Foundation Models) · React Native (Expo), Swift / SwiftUI (native iOS), Flutter

Tools: Vercel, Git, CI/CD, BullMQ / Inngest, Vitest & Playwright (testing)

EXPERIENCE

Independent / Freelance

2024 - Present

AI-Native Product Engineer

Remote

- Build production-grade web apps, SaaS, and MVPs end to end for founders and startups.
- Own the full lifecycle solo - architecture, development, deployment, and a clean handoff.
- Most recent: a regulated, multi-tenant fintech SaaS delivered solo for a client.
- Work with an AI-native workflow to deliver the output of a team without lowering quality.

Dr. Jose Rizal Memorial Hospital

June 2024 - August 2024

IT Department Intern

Dapitan City

- Maintained the hospital website, and built and deployed new pages as they were needed.
- Provided day-to-day IT maintenance and technical support across the hospital.
- Inspected and serviced hardware across departments - computers, printers, and CCTV systems.

SELECTED PROJECTS

Fiscplus

- Compliance-grade, multi-tenant SaaS for a Belgian accounting firm; built solo with React 19, NestJS, Prisma, and PostgreSQL.
- Three role-scoped portals from one type-safe API, with 92+ RBAC permissions and per-user overrides.
- A full Belgian AML compliance lifecycle, real-time sync (80+ domain events), and an append-only audit trail.

Boardly · Live: boardly.cjjutba.com · Code: github.com/cjjutba/boardly

- Multi-landlord property-management SaaS built solo with Next.js 16, Supabase, and Postgres Row-Level Security.
- Auto-generates each tenant's monthly bill on their own due date via an idempotent daily cron.
- Confirms payment proof into tamper-proof sequential receipts, with database-level tenant isolation.

AuraHire · Live: aurahire.site · Code: github.com/cjjutba/aurahire

- Full-stack AI recruitment platform built solo with Next.js 16, NestJS, Supabase, and OpenAI.
- Explainable scoring - every score ships with weighted components and verbatim resume evidence.
- Upstream bias mitigation (resumes PII-redacted before scoring); multi-tenant and fully audited.

Coasta

- Native iOS cash-flow app for freelancers, built solo in Swift 6 and SwiftUI.
- On-device AI capture turns plain text into entries using Apple's Foundation Models.
- Fully offline and private by construction - no backend, no data leaves the phone.

EDUCATION

Jose Rizal Memorial State University

May 2025

Bachelor of Science in Computer Engineering
